

# A DATA DRIVEN EXPLORATION OF APPLE'S IPHONE IMPACTS IN INDIA

PROJECT DEVELOPMENT PHASE

# Model Performance Metrics:

- With MetricKit, you can receive on-device app diagnostics and power and performance metrics the system captures. The system delivers metric reports about the previous 24 hours to a registered app at most once per day, and delivers diagnostic reports immediately in iOS 15 and later and macOS 12 and later.

# Project Documentation:

- To build documentation for a project, choose **Product > Build Documentation**. DocC compiles the documentation and opens it in Xcode's documentation viewer. DocC uses the comments you write in your source code as the content for the documentation pages it generates.

# PROJECT Demonstration:

- You can explore all the features of Final Cut Pro for iPad by downloading a demo project. You can also download effects, transitions, titles, and other content that comes with your Final Cut Pro for iPad subscription, and access additional help resources.
